Taka 250.00 only.

Preface

A well-known doctor once told me that “learning is the noblest form of begging.” This is certainly what it feels like just before the FCPS or MBBS exam when the brain labours with the weight of temporary information. OSPE is not an inherently difficult subject-only made so by the unholy trinity of a bad night on-call, dwindling time and a thick textbook. We hope that this book is the remedy to this unfortunate combination, and helps a little to play the game.

We are confident that this book will assist any trainee surgeon or undergraduate students to sail through the FCPS or MBBS OSPE with ease and we hope to make the time taken to prepare for the exam that much more enjoyable and rewarding. Our desired outcome is to secure the future of surgical science and practice, by guiding trainee surgeons or undergraduate students in their quest for mastering their art.
